About Me

I remember clearly when I run the “hello world” application in the console and get feedback. I was amazed how great a computer can work and how programming can translate to pure magic. What started as “hello world” has grown and developed passion towards learning programming that only gets better as time goes by. This journey for sure has not been easy and I can always regard discipline, determination, consistency, patience and thirst in learning everyday.

Skills

Javascript

- React.js

Python

- Django

Object Oriented Programming

Data Structures and Algorithms

MySQL database

Machine Learning
